Search for patches # A B C D E F G H I J K L M N O P Q R S T U V W X Y Z In the Updates category, you can find free patches for all kinds of games. Those are official updates, developed by video game developers (most often the original game's devs). Updates can change games in various ways. In many cases, they're made to patch different kinds of bugs and glitches, such as unexpected crashes, malfunctioning AI, wrong scripts of graphical glitches. Updates can also improve game balance (for example by changing the power of attacks of certain enemies in RPGs), enhance available settings' configuration, improve the graphics, and even enhance the game content with additional missions, units, vehicles or characters - it all depends on the genre of the given game. In the description of each of these files, we've included the full changelog (quoted after the developer of the update). In order to open and/or unpack some of the mods and patches, .zip software might be required, such as WinRAR, 7-zip or Win.zip - you can find them here. Page 5 The software included in this section is very useful in daily application of your computer. It has been divided into a few categories, including: Security (antivirus and firewall software, among others), System tools (improving Windows systems) and Audio & video (everything you need to play audio and video files on your PC). For the gamers is a special category containing software mandatory for players, such as GPU drivers, video game console emulation software and clients for different digital-distribution platforms (such as Steam, Uplay and Origin). In the Software category, you can find utility software available for free (not for commercial application), that can improve the performance of your PC in many ways. The software includes codec packs, mandatory to play all types of movies, communicators, internet browsers, apps for opening and/or editing sound files and videoclips, data download managers etc. Of course, in the software tab there are also programs for gamers. Those include: driver packs, required in order to get the most of Radeon and GeForce GPUs, hardware platforms emulators (virtual computers and consoles - both new and old), apps improving the performance of your PC in video games, tools for creating/modifying games, software for configuring controllers (such as gamepads) etc. The software shared by our page is chiefly meant for personal computers running on Windows systems. There are both free full versions (freeware), as well as trial versions (shareware).
